AGROFLUX · PITCH · 2 MIN 50 S

Roteiro do pitch, slide a slide

Cada trecho indica o slide, o tempo, onde você aparece e a fala em inglês. "→ avance" marca a troca de slide.

ANTES DE GRAVAR

- Deck: `claude.ai/artifact/CgskFixrT6ZxDZvoKxeixK` → **Present** (tela cheia). Seta → ou espaço avança.
- OBS: captura da tela + webcam num canto. Nos slides 2 e 10, aumente a webcam (ou grave você em tela cheia) — são os trechos "na câmera".
- Ritmo calmo: ~140 palavras por minuto. Respire em cada "→ avance". Pode gravar slide a slide e juntar no CapCut.
- Se passar de 3 min, corte o **slide 7** inteiro.

01 Problema

1
Capa

0:00 – 0:03

Abertura

Fazer: deixe a capa 2–3 s em silêncio (ou corte na edição) e avance.

→ avance

2
~20%

0:03 – 0:22 · você na câmera

Gancho

> In Brazil, farmers buy fertilizer today and pay at harvest, six months later. Someone has to carry that credit. Most people think it's the banks.

> It's not only the banks: input distributors already fund about 20% of all agricultural credit in Brazil, with their own cash.

→ avance

3
1,990 · 3× · +93%

0:22 – 0:37

A crise e o capital

> That cash is stuck in receivables. And 2025 was the worst year on record: almost 2,000 bankruptcy filings in agribusiness, and farmer default tripled since 2021.

> Funders have money: agricultural credit funds doubled in a year.

→ avance

4
Três perguntas

0:37 – 0:52

As três perguntas

> But before buying a receivable, every funder asks the same three questions. Does this sale exist? Does the farmer acknowledge the debt? And was it already sold to someone else?

> Today the answers live in spreadsheets, PDFs and phone calls. So mid-sized distributors pay expensive bank rates, or get nothing.

→ avance

02 Solução

5
Passaporte

0:52 – 1:15

O passaporte digital

Opcional: cobrir com 3–4 s da demo (passaporte, QR no celular, tabela de propostas).

> AgroFlux gives every sale a digital passport on Solana.

> The distributor uploads the invoice; AI checks it against the declared data, and only its fingerprint goes on-chain.

> The farmer confirms the purchase by scanning a QR code at the counter. That confirmation goes on-chain too, and the risk rating improves.

> Funders bid in a marketplace, priced like the real market: the Central Bank's benchmark rate plus a spread by risk.

→ avance

6
Transação atômica

1:15 – 1:37

Liquidação atômica e trava

Opcional: cobrir com o Explorer mostrando as 3 transferências e a transação recusada.

> When the distributor accepts, the receivable becomes a unique token, and our Solana program swaps it for the cash in one atomic transaction:

> the funder gets the token, the distributor gets paid, AgroFlux collects its fee, and the invoice is locked forever.

> Try to sell it again, and Solana itself rejects it.

→ avance

7
Why Solana (cortável)

1:37 – 1:55

Por que Solana

> This only works on Solana. Each step costs a fraction of a cent and settles in seconds, which makes anchoring a 30,000-dollar farm receivable worth it.

> And nobody sees a wallet: distributors and farmers just use a web page.

→ avance

03 Negócio, status e time

8
0.5% · $30B

1:55 – 2:18

Modelo de negócio e mercado

> We charge 0.5% of face value, collected on-chain, inside the settlement itself. Distributors in our target association move 30 billion dollars a year. A small share of that is a real business.

> And we don't compete with Brazil's official registries — we sit on top of them, as the verification, marketplace and settlement layer they don't provide.

→ avance

9
Status

2:18 – 2:27

Ao vivo na Devnet

> AgroFlux is live on Devnet today, with the full cycle: registration, farmer acceptance, atomic assignment, double-sale rejection and payment at maturity.

→ avance

10
Time

2:27 – 2:42 · você na câmera

Time

> I'm Wilgnner. I grew up in a dairy and grain farming family, so I've watched this credit cycle from the inside.

> Marco and I are engineering students at ITA and members of ITA Finance — that's where the farm and the finance sides of AgroFlux came together.

→ avance

11
Fechamento

2:42 – 2:50

Próximo passo e assinatura

> Next: a pilot with one distributor and one fund in the 2026/27 season.

> AgroFlux: trust you can verify, cash you can settle.

Fazer: segure o slide 2–3 s em silêncio antes de parar a gravação.

CUIDADOS

Não diga que a registradora ou os financiadores são reais, nem que o token tem valor (se perguntarem: *"demo on Devnet with a simulated registry"*). Se preferir falar em reais, no slide 8 troque "30 billion dollars" por *"171 billion reais"*. Se o Marco trouxer uma frase forte das conversas, ela entra no slide 4.
